The Phenomenon of Evolution

Taliesin Theatre, Swansea, November 27th at 2 pm, live and on Zoom.

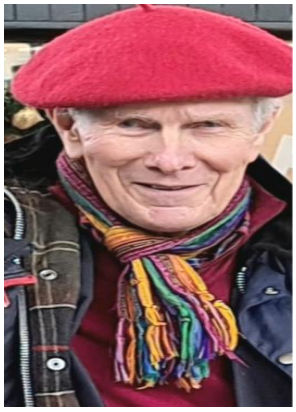

A talk by Kevin Arbuckle, Associate Professor of Evolution at Swansea University and Robert Tennant-Ralphs, an author of books about nature and evolution.

Life and Making of an Evolutionary Biologist.

From a childhood filled with innate wonder at the natural world to a career spent trying to understand how life's rich diversity arose.

Kevin reflects on his key influences in becoming an evolutionary biologist and the beauty of the link between natural history and the processes that create and maintain biodiversity.

Interconnected Evolution – The Symphonies, Choruses and Solos for Life.

Drawing on a lifetime of nature study, curiosity and discovery, Robert explores a thought-provoking question:

Can evolution and natural selection alone explain life's remarkable complexity and harmony, or does creation point to a greater intelligence?

Entrance is free. Refreshments can be had in the café upstairs before the talk.
